

Tradeflow Product Management Centre

Tradeflow's Product Management Centre is a web-based tool for importers and exporters to store information about the products they buy and sell, along with important cross border attributes.

Cross-Border Product Attributes

- Classification Codes (Harmonized System)
- Duty Rates, and Duty Reduction Programs
- Packaging Information
- Multi-lingual descriptions
- Product Images
- Other Government Agency Requirements
- Anti-Dumping / Countervailing Cases

Tradeflow's Product Management Centre acts as the central repository for a company's global product classification compliance process.

Product Management Centre Functionality

- Flexible and powerful searching and reporting capabilities
- Collaboration across departments or with external logistics providers and customs brokers
- Use interactive work queues to assign products to various members of the supply chain
- Upload existing product lists
- Extract for reporting purposes

Tradeflow's Product Management Centre is integrated with the Trade Reference Centre, our global trade content service, giving access to customs tariffs for over 160 countries.

Trade Reference Centre Integration

- Classify products for Harmonized Tariff Code, Export Control Numbers and US Export Schedule B
- Evaluate current import and export restrictions
- Perform landed cost estimates between multiple countries in minutes

A secure system, Tradeflow gives you greater control and helps you manage your products and minimize the risk of errors that could occur in the logistics process.

Security & Control

- Share controlled access with your vendors, customers, and service providers
- Comprehensive audit trail that shows detailed historical changes by user
- Integrated with Expeditors' customs declaration processing systems
- Tradeflow can integrate electronically with other service providers
