What Makes Tradeflow Different?

Tradeflow is a web-based software service suite designed by compliance professionals for compliance professionals. Our software offering is paired with our team of industry experts who value *exceptional customer service*. These solutions provide tools to help importers and exporters gain more control of their global logistics supply chain through visibility and data management.

Divided into integrated modules, or Centres, Tradeflow facilitates activities such as global product classification, landed cost estimation, compliance management, commercial document creation, and restricted party screening.

DIFFERENTIATORS

Other Organizations:

- Standardized management systems built by software engineers, which can feel rigid and disjointed.
- Costly subscriptions with tools you don't necessarily use.
- Contracts for at least a year, locking you into a service that may not suit your business model.
- Limited support and self-guided instructions.

The Tradeflow Strategy:

- Customizable module-based subscriptions, so you only pay for services you need.
- No long term-commitment, contract, or large upfront implementation fee.
- Pick and choose your needed functionality and add or subtract services as needed.
- Team of compliance experts dedicated to guiding you through onboarding.
- HelpDesk ready to assist when questions arise.

BENEFITS

Our unified platform allows you to improve the speed to data flow, embed your resources for all stakeholders, and integrate automatically with Tradeflow. For over 20 years, Tradeflow has helped companies leverage our platform to build **custom trade compliance** programs that move their organization forward. Our network of **over 160 countries** aggregates data with dozens of screening lists and Harmonized Tariff Schedule (HTS) data that could be hard to obtain otherwise. We'll provide an automated and detailed history of changes built into your software, giving you a trail of reference in time of need.

With the Tradeflow platform, we help you reap the benefits of an optimal supply chain:

- Build a comprehensive compliance safety net.
- Obtain access to global trade content.
- Centrally store, manage, and distribute trade data.
- Overcome internal system constraints.
- Provide a flexible, scalable, cost-effective solution
